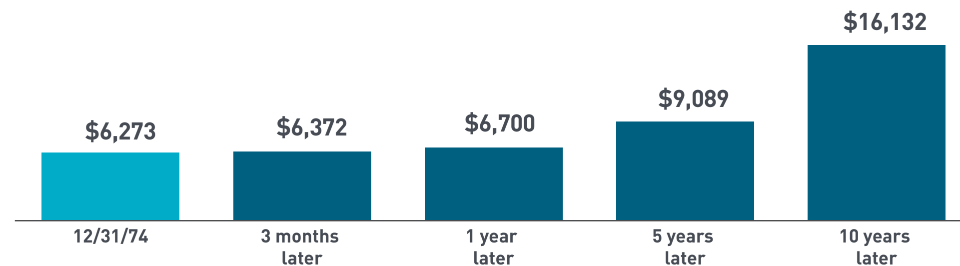
It's Time in the Market, Not Timing the Market

We believe it is important to remember one of the fundamental concepts of investing: "staying the course." Here's a powerful reminder of the importance of remaining invested through difficult market environments. The charts below show how a hypothetical $10,000 in the S&P 500 at the end of 1972 would look at various periods if an investor moved the money to cash after two years versus keeping it invested. On the reverse side we show how that investment would have looked two years later.

> "The hardest thing—and the most important thing—is to continue to think long-term."
>
> – MIKE ROBERGE, MFS CHAIRMAN

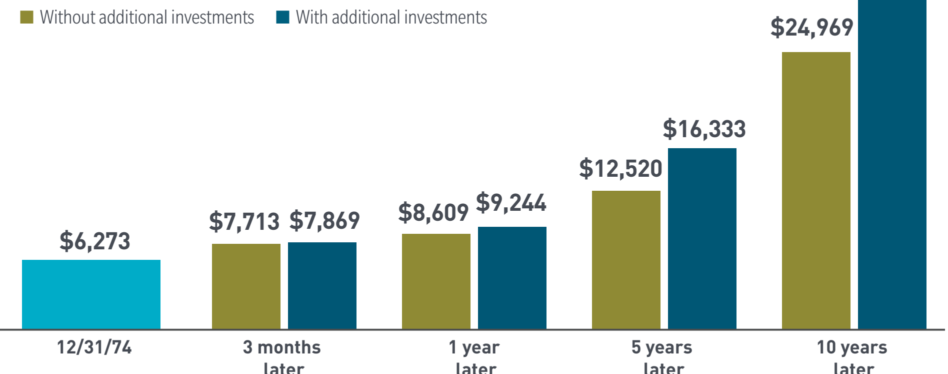
It's near impossible for anyone to successfully time the market with any degree of accuracy for any length of time.

Long-term results if an investor moved to cash (at end of year 2 from reverse page)



Let's assume that when your original investment dropped to $6,273, you removed it from the market and reinvested it in a 6-month CD at the average 9.90% for this period. (CDs are FDIC insured and have principal and interest guarantees but offer no opportunity for growth of capital or income.)

Long-term results if an investor stayed with stocks



But what if you had kept your $6,273 invested in the S&P 500 instead of investing in a CD? Or even had gone a step further and set up a systematic investment plan adding $50 per month, starting on 1/1/1975, for the next 10 years? The use of a systematic investment plan does not guarantee a profit or protect against a loss in declining markets. You should consider your financial ability to continue to invest through periods of low prices.

Short-term reactions could leave you at a loss

Shown is a hypothetical during a time when the market experienced a prolonged downturn (1973 - 1974). If you had pulled out of the market after those tough two years instead of staying the course, you would have missed out on the upturn when it finally came (as shown on p. 1). Of course, past performance is no guarantee of future results, but this is one history lesson that could be very valuable in today's investing environment.

Stock returns during the '72 to '74 bear market

A $10,000 hypothetical investment in the S&P 500 on December 31, 1972

An action plan: Be sure to talk with your financial professional to find out what's right for you. Consider your investment time horizon, risk tolerance, and your financial ability to continue to invest through periods of low prices. Remember that the use of a systematic investing program does not guarantee a profit or protect against a loss in declining markets.
